

Small portable filtration systems – ideal for wind turbines.

Mobile filtration systems – all stainless steel construction.

Systems can be fitted with moisture sensors, particle detectors and pre-heaters.

High capacity / high flow rate systems available for more demanding applications.

Portable coolant cleaning units - remove trampoil , extend fluid life.

Condition monitoring – fitted to our filtration systems or as portable battery powered units. USB datalogging software included.

Permanently installed offline filter housings for integration into existing lubrication / hydraulic circuits

Specialist subsea filtration for ROVs & offshore equipment

Central coolant recycling stations - dramatically increases the life of metalworking fluids.
